

Can an AirID device be connected to more than one device at the same time?

Question

Can an AirID device be connected to more than one device at the same time?

Answer

It is not possible to have an active BLE connection to more than one device at the same time.

But AirID devices can store up to 10 pairing information (be paired with up to 10 devices) and the "Prefer Device" feature makes it easy to switch between the devices the user wants to connect with.
