## What is the Domain Controller Server Diagnostics Tool ?

The Domain Controller Server Diagnostics Tool or Server Diagnostics Tool in short is a tool designed to help you setup your AirID VIRTUAL Instance in guiding you along the process of enrolling all necessary certificates.

It will help you through the process of creating

- detecting or creating LDAPS Certificate on your domain controller,
- detecting or importing a domain controller certificate on your domain controller
- and importing the AirID VIRTUAL issuing certificate required for the AirID VIRTUAL service onto your Domain Controller

The Domain Controller Server Diagnostics Tool doesn't require an **Installation** but needs to be run in privileged mode.
